Summary

Milk production increased 3.5 percent in 2005 to 177 billion pounds. The rate per cow, at 19,576 pounds, was 609 pounds above 2004. The annual average number of milk cows on farms was 9.04 million head, up 29,000 head from 2004.

Cash receipts from marketings of milk during 2005 totaled \$26.7 billion, 2.4 percent lower than 2004. Producer returns averaged \$15.20 per hundredweight, 5.8 percent below 2004. Marketings totaled 176 billion pounds, 3.6 percent above 2004. Marketings include whole milk sold to plants and dealers and milk sold directly to consumers.

An estimated 1.08 billion pounds of milk were used on farms where produced, 2.4 percent less than 2004. Calves were fed 87 percent of this milk, with the remainder consumed in producer households.

Reliability of Production, Disposition, and Income Estimates

Survey Procedures: These estimates are based on inventory and price estimates as published in NASS milk production and agricultural prices reports, as well as information obtained from federal market milk orders and other sources. Readers are referred to the Survey Procedures section in NASS' monthly *Milk Production* publication and the *Agricultural Prices* publication released February 28, 2006.

Estimation Procedures: Estimation procedures for prices and milk production estimates are defined in the Estimation Procedures section of the reports referenced above.

Revision Policy: Revisions to previous estimates are made to improve current estimates. Previous year estimates of milk production are subject to revision when the current year estimates are made. Estimates are also reviewed after data from the Department of Agriculture five-year Census of Agriculture are available. No revisions are made after that date.
