PRODUCER MILK MARKETED UNDER FEDERAL MILK ORDERS BY STATE OF ORIGIN*

During 2000, milk processors regulated under the 11 Federal milk orders purchased 117 billion pounds of milk from about 69,600 dairy farmers. While the marketing areas, which determine where fluid milk processors are regulated, are defined specifically by the Federal orders, the milk supply areas—the sources of the 117 billion pounds of milk—are not specified by the orders. In order to provide information on these supply areas, surveys are made periodically to determine the States where the dairy farmers marketing milk under Federal orders are located and, therefore, the States from which the producer milk receipts originated. This article provides the results of this survey for 2000 and presents comparisons to surveys for earlier years. Relationships to total U.S. milk marketings also are reported.

During 2000, as has been the case for several years, significant volumes of milk that normally would have been marketed under Federal milk orders were not pooled mainly due to disadvantageous Class/uniform price relationships. For 2000, this not-pooled volume is estimated at about 3.6 billion pounds and again, has been excluded from this survey. This was done to provide information for actual milk supply areas for Federal milk order markets in 2000. Some findings of the current survey are:

- (1) Producers located in the 48 contiguous States marketed milk under Federal milk orders during 2000. This volume of milk represented 72 percent of the fluid grade milk marketed in the country and accounted for about 70 percent of all the milk marketed (fluid grade and manufacturing grade combined). Milk marketings under Federal milk orders accounted for 90 percent or more of fluid grade milk marketings in 33 states. (See table A.)
 - It should be pointed out that the National Agricultural Statistics Service has expanded the items that now are in included in its "milk marketed" statistic. In addition to the traditional "milk sold to plants and dealers", "milk marketed" also includes milk sold directly to consumers and milk produced by institutional herds. Nationally, these two items probably have increased this statistic by about 1 percent, although the effect for some States would be significantly larger. As the two additional items are excluded from Federal order milk marketings, the "shares" in Table A for those States where these items are more significant may be lower than in past surveys solely because of this change in "milk marketed". This likely explains the decrease in these shares shown for Oklahoma. Also, for some States these shares may be slightly lower than in past surveys because Federal orders now exempt from regulation handlers that sell less than 150,000 pounds of fluid milk products in a month.
- (2) While milk supply areas for individual Federal milk orders have been becoming broader for some time, the consolidation of Federal milk orders in 2000 significantly increased this trend. Milk supply areas averaged 13.2 states in this year, up from 7.4 in 1998. Dairy farmers in 28 different States marketed milk

under the Southeast order; handlers regulated under the Appalachian order received milk from dairy farmers located in 25 different States. (See table C.)

Dairy farmers located in Wisconsin marketed milk under 6 different Federal milk orders. Dairy farmers located in Idaho, Illinois, Indiana, Kansas, Michigan, Minnesota, New Mexico, Texas and Utah marketed milk under 5 orders. (See table B.)

(3) Another development in the broadening of Federal milk order supply areas is the association of producer milk from States located greater distances from the market. Traditionally, this has occurred for those orders that experience significant monthly and seasonal milk supply deficits. For example, dairy farmers in Indiana, Kansas, New Mexico, and Pennsylvania marketed milk to handlers regulated under the Southeast order in most months of 2000. In the Fall months, Southeast regulated handlers also received producer milk from Michigan, Minnesota, and Wisconsin. A less frequent example of this development occurs when a fluid milk processing plant producing a specialty product that is distributed over a wide geographic area sells enough of this product in a distant market to meet the order's minimum pooling standard. This explains the association of producer milk in Idaho, Nevada, and Utah with the Northeast order.

The reform and consolidation of Federal milk orders that took effect at the beginning of 2000 also has contributed to the association of more distant producer milk with an order. For some orders, the provisions for pooling producer milk were made less restrictive. This made it easier to associate producer milk with an order and share in that order's higher blend or uniform price. This could be done without incurring much additional transportation costs, as most of this milk did not have to be actually shipped to that order. Thus, producer milk in California was pooled on the Upper Midwest order. The vast majority of this milk was actually processed in unregulated California plants and even participated in the State's milk order pool. Also, during 2000, increasingly larger volumes of producer milk from Minnesota and Wisconsin were pooled on the Central order and, in the second half of the year, much larger volumes of producer milk from Wisconsin were pooled on the Mideast order.

(4) In some States, the proportion of all milk marketings subject to Federal milk order regulation remains noticeably small. There are several explanations of this relationship. First, it exists in States which have State milk orders. Some examples of this situation are California and Nevada. Second, this relationship exists in States where manufacturing grade milk marketings still are a significant proportion of total milk marketings. Only fluid grade milk can be marketed under Federal milk orders. An example of this situation is North Dakota. Some States have neither Federal nor State milk order regulations; for example, Wyoming. Finally, in some areas, the fluid milk (Class I) market may not be large enough to accommodate all the producer milk that would like to be

associated with the order, given the order's pooling standards. An example of this is Idaho.

(5) Dairy farmers in Wisconsin once again delivered the largest volume of milk to handlers regulated under Federal milk orders—20.9 billion pounds, 18 percent of total producer deliveries. Other leading States in terms of milk marketings under Federal orders were New York, Pennsylvania, Minnesota, and Texas. These five States, among the leaders in total milk marketings in the country, accounted for 47 percent of total Federal milk order marketings. Other states in the Top Ten were Michigan, Washington, New Mexico, Ohio, and Iowa. (See table D.)

In looking at this data for 1980, 1990, and 2000, the States included in the top 10 States delivering milk to Federal orders has changed very little. Nine of the 10 States are listed each year. The top 4 States have remained the same. The notable exception is New Mexico. This State jumped from the 31st rank in 1980, to 19th in 1990, and to 8th in 2000. The increase in the volume of producer milk marketed under Federal orders increased more than 7 times over this period.

^{*} Prepared by John P. Rourke, supervisory dairy products marketing specialist, Mary Taylor, dairy products market specialists, and Vergie Hughes, market information assistant, Market Information Branch, Dairy Programs, Agricultural Marketing Service, August 2001.

Neb-Minn Maryland	9,828 4,244	0.13 0.06				

^{1/} The source of the receipt is based on the location of the producer, not the location of the regulated handler. Marketing area totals may not add due to rounding.

^{2/} For some marketing areas, receipts from some States have been combined in order to mask either restricted data or small volumes. Generally, the States are listed by decreasing proportions of deliveries to the marketing area. States in parenthesis have producers who delivered less than three million pounds to the marketing area.

^{3/} For these marketing areas, handlers elected not to pool producer milk that normally would have been associated with the marketing area due to disadvantageous price relationships.

^{4/} Less than 0.01 percent.

^{5/} Data cannot be shown as it pertains to the operations of fewer than 3 producers and, therefore is considered confidential. The data has been excluded from the marketing area total.
