Effective Date: March 2015 Page 1 of 112

INTRODUCTION

These instructions contain information and guidelines to help personnel of the USDA Specialty Crops Inspection (SCI) Division uniformly complete the Fruit and Vegetable Inspection Certificate (FV-300). This guidance does not include instructions unique to FEIRS FV-300 Inspection Certificates.

These instructions supersede all prior instructions on writing certificates, including the 1992 edition of this instruction, General Market Manual, and guidance found in commodity inspection instructions. These instructions do not supersede or change any sampling or grading procedures or policies.

GUIDE FOR ELECTRONIC USAGE

The AIM system of instructional manuals is available electronically in Adobe Acrobat Portable Document Format (PDF) at the following intranet address: http://agnis/sites/FV/PPB/AIM/default.aspx.

When accessed electronically, AIM materials have hyperlinks and hypertext (visible as underlined <u>blue text</u>) available to the PDF user. Clicking on a hyperlink takes the reader to a web site with information relating to the subject. Hypertext links the reader to a different page within the current manual, or even a different manual, with information relating to the subject. For example, the hypertext in the Table of Contents allows a reader to go directly to the section of interest in the manual by clicking on the section title.

PDF offers a variety of tools depending on the Adobe version the reader has. The newer the version, the more tools available. PDF documents are easily searchable for content within a document or within multiple documents. To learn about the variety of PDF search options:

- Click on the "Help" tab on the top of any page in Adobe Acrobat,
- Then click on the "Adobe Acrobat Help" bar,
- Type the word "Search" in the "Search" box, and click on the "Search" button,
- A series of options will become available.
- Click on the "Access Search Features" link and follow the instructions for the type of search you are interested in.

GENERAL INSTRUCTIONS

Use the Fresh Fruit and Vegetable Inspection Certificate (FV-300) for all regular commercial receiving point inspections at terminal markets, en route/export certification (see following exceptions), and import certification. An FV-300 serial number may be cross-referenced on export certification documents if the product meets export requirements.

Exceptions: Use the Memorandum of Inspection for Canadian Destinations (FV-205) for exports to Canada as it is the only certificate recognized by Canadian Customs for certification of

Effective Date: March 2015 Page 2 of 112

compliance with Canadian import requirements. Use the Export Form Certificate for Non-Canadian Destinations (FV-207) for certification of products exported to countries other than Canada under the export fruit acts.

The FV-300s are serially numbered, and each office is supplied with books of certificates with consecutive numbers. If possible, issue certificates in ascending numerical order. Before issuing a certificate, verify that each certificate copy bears the same number as the original. If the serial number on the certificate does not match the number(s) on the copies, void that certificate and report it to the Inspection Branch (Operations).

The certificate is accompanied by Form FV-300N, which is the standardized notesheet used to record the results of the inspection. Form FV-300N is the only notesheet authorized for use in terminal market inspections. Development of other versions of this form for local use, such as state computer generated notesheets, must be approved. The notesheet must contain all information that appears on the certificate, as well as any other information as directed by instructions in this manual. Do not report descriptions of positive grade requirements, which will never be used on the certificate. In addition, do not describe the number of rows, number of layers, and lengthwise/crosswise orientation of the load unless they affect the condition of the product (see Loading section).

The certificate gives applicants a clear, concise, official report at the time of the inspection to facilitate timely settlements based on official inspection results. The notesheet allows authorized SCI Division staff members to issue a certificate based on the data on the notesheet. A copy of the certificate is provided to the applicant and listed shipper upon completion.

The notesheet must be complete and legible, allowing any inspector to write a complete certificate from it.

Data Stubs

Data stubs are nearly obsolete so most of the instructions pertaining to them have been removed. Do not complete the data stub unless otherwise directed.

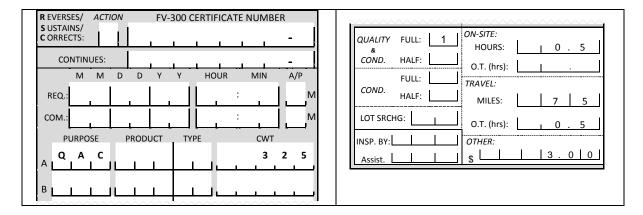

If you are directed to do so, only complete the "PURPOSE," "CWT" (hundredweight), and fee sections using the following purpose codes:

- QAC: Quality and Condition inspection.
- **CON:** Condition only inspection.
- **SEE:** Section 8(e) import inspection.
- **IMQ:** Quality and Condition import inspections at point of entry not under Section 8e.
- **IMC:** Condition only inspection on imports at point of entry not under Section 8e.
- **NOG:** No established U.S. Grade.
- **DMP:** Dump inspection.
- **FRZ:** Freezing statement only.

Effective Date: March 2015 Page 3 of 112

- **ORC:** Ornamental crops (cut flowers and Christmas trees).
- **NUT:** Nut inspection (tree nuts and peanuts).
- **OTH:** Other, including count only, net weight only, size only, temperature only, raw products for processing with standards that do not stipulate tolerances (e.g. pickling cucumbers), and other inspections not listed above.

Examples:

If you are asked to do a quality and condition or condition only inspection combined with count, net weight, size, etc., enter the "QAC" code for that lot.

For CWT, enter the approximate hundredweight of each lot reported. Hundredweight can be determined by multiplying the number of packages times the weight on the container or the standard weight for the container used, or by using the total manifested weight (for bulk loads), divided by 100. Round up to the next highest hundredweight if the resulting fraction is .50 or more, and round down to the next lower hundredweight if the fraction is .49 or less. For example, 61 cartons weighing 25 lbs. each (61 X 25 lbs.) equals 1525 lbs. 1525 lbs. divided by 100 equals 15.25, which would be rounded down to a CWT of 15.

Superseding Certificates

A. Certificates with Errors

Never make corrections on the following vital points of the certificate:

- Carrier initials or numbers
- Date
- Time
- Name of applicant or shipper
- Grade statements
- Percentages of defects or size
- Number of packages

Effective Date: March 2015 Page 4 of 112

If a mistake is discovered on a vital point before certificate issuance, void the certificate. When voiding a certificate, write the word "VOID" in large letters across the center of the certificate. If a mistake is discovered on a vital point after issuance, supersede the certificate.

Corrections of other information (non-vital points) may be made on the certificate. <u>Initial the change(s) on all copies</u> of the certificate and <u>never allow the</u> original certificate to leave your control. See example below.

OTHER
MOSTLY FIRM, SOME FIRM RIPE
MANY (DGH)

B. <u>Certificates with Duplicate Numbers</u>

If two certificates are given the same serial number and are issued prior to discovery of the duplicate numbers, recall all outstanding copies of one set, including the original, and issue a superseding certificate. Include the number of the certificate being superseded and date of the inspection under "REMARKS" of the superseding certificate. If the certificate being superseded and the certificate with the duplicate serial number were issued on the same day, include the commodity, number of packages, and any information that makes one certificate different from the other in the "REMARKS" section as shown below.

REMARKS: THIS CERTIFICATE SUPERSEDES CERTIFICATE NUMBER T-XXXXXX-X, DATED JULY 19,2013,

FOR 500 CARTONS OF GRANNY SMITH APPLES ACCOUNT DUPLICATE SERIAL NUMBERS.

C. For All Superseded Certificates

Write "CORRECTED" in capital letters directly above the serial number as shown below (red letters optional).

Effective Date: March 2015 Page 5 of 112

Enter a statement such as the one in the example below in the "REMARKS" section of the correcting certificate, showing the reason for correcting the certificate.

REMARKS:

THIS CERTIFICATE SUPERSEDES CERTIFICATE NUMBER T-XXXXXX-X ACCOUNT INCORRECT PERCENTAGE OF DECAY.

On the file copy of all superseded certificates write the following statement across the face of the certificate in large letters and red ink: "Superseded by certificate [number]" (see example certificate number's <u>1A</u> and <u>1B</u>).

Do not record a fee on a superseding certificate. Instead, reference the original certificate number in the fee block as shown below. This policy will help prevent applicants from being billed twice for the inspection.

SEE T-XXXXXX-1

Appeal Certificates

A. When an appeal is honored

When an appeal is honored include the following on the certificate:

Write "APPEAL" in capital letters directly above the serial number as shown below (red letters optional).

Make a statement, such as the one below, on the certificate (also see example certificate numbers 9, 17 and 18).

%	THIS COVERS AN APPEAL INSPECTION ON THE ABOVE DESCRIBED	
%	LOT WHICH WAS PREVIOUSLY INSPECTED ON [DATE] AND REPORTED ON	Ī
%	FEDERAL CERTIFICATE [M-XXXXXX-X] WHICH IS HEREBY [REVERSED/SUSTAINED]	П
%	AS TO [QUALITY, CONDITION AND/OR GRADE, ETC., AS THE CASE MAY BE].	П

If only a portion of the load, such as only one lot, one size, or one grower number, is reversed, issue a separate certificate for the remaining portion that was sustained (each cross-referenced).

Effective Date: March 2015 Page 6 of 112

B. When an appeal is not honored

When an appeal is not honored or it's determined that there is no appeal (see General Market Inspection Instructions), handle the certificate as a reinspection. Cross reference the second certificate to the first by a statement in the "REMARKS" OR "OTHER" section of the certificate and report the reason it was not honored, as shown in the example below.

% APPEAL REQUESTED ON CONDITION FACTORS ON M-XXXXXX-X BUT NOT HONORED DUE TO TIME LAPSE AND HIGH TEMPERATURES.

Examples of "REMARKS" statements for lots handled as reinspections.

REMARKS:	THIS LOT WAS PREVIOUSLY INSPECTED ON [DATE] AND REPORTED ON
	FEDERAL CERTIFICATE [M-XXXXXX-X].
REMARKS:	LOT A AND PORTION OF LOT B WERE PREVIOUSLY INSPECTED ON [DATE] AND REPORTED
	ON FEDERAL CERTIFICATE [M-XXXXXX-X].
REMARKS:	APPLICANT STATES PORTION OF LOT INSPECTED ON [DATE] AND REPORTED
	ON FEDERAL CERTIFICATE [M-XXXXXX-X].

C. Fees

Apply the regular fee when an appeal inspection sustains the previous inspection.

Charge no fee when an appeal inspection reverses the previous inspection, except when PACA is the applicant or in the case of a market on shipping point appeal. In the "ESTIMATED TOTAL" block reference the original certificate as shown below.

SEE M-XXXXXX-X

If there is mileage, overtime, or other related expenses involved, charge the applicant. Report the expenses in the "ESTIMATED TOTAL" block. Also, make a statement in "REMARKS" explaining that the "ESTIMATED TOTAL" does not include an inspection fee, but only reflects additional expenses incurred as shown in the following example.

Effective Date: March 2015 Page 7 of 112

REMARKS:

NO INSPECTION FEE WAS APPLIED. ESTIMATED TOTAL REFLECTS ADDITIONAL EXPENSES

INCURRED.

If a portion of the load is sustained, issue a separate certificate charging the regular fee for that portion. Any additional expenses incurred will also be charged to the applicant.

When PACA is the applicant, charge an hourly rate for the inspection time, plus any related expenses or overtime.

If an appeal is not honored (handled as a reinspection), apply the regular fee plus any related expenses.

Effective Date: March 2015 Page 8 of 112

IDENTIFYING THE INSPECTION

Inspection Started

Show the date and hour in these blocks on the certificate at the time the <u>inspection process</u> <u>begins</u>. Include leading zeroes when completing each area of the date and time section so that all entries are two digits.

Examples:

For June 12, 2013, at 11:30 am, enter:

For July 5, 2013, at 12:00 noon, enter:

If the inspection is completed the following day or at a later date, also show the date and hour of completion under "REMARKS," along with a brief explanation. Record the exact local time on the certificate. Make no reference to standard or daylight savings time.

Applicant/Address

The party requesting the inspection is the applicant. The applicant may be a shipper, receiver, broker, carrier, or government agency, and is always responsible for fees and expenses, regardless of what agreements they may have with other parties. One party cannot request an inspection in the name of another party.

In addition to the applicant's name, enter the address (city and state) on all certificates.

Shipper/Address

Enter the company name and address (city and state) of the shipper on all certificates, if known. If it is not possible to obtain the name and address of the shipper, write "Unknown" in this block. **Never leave this block blank.**

Effective Date: March 2015 Page 9 of 112

Inspection Site

The site is the actual location where the inspection is performed. If the inspection site is the same location as the "Applicant," enter "Applicant's warehouse," "Applicant's store," "Applicant's rail siding," etc. as shown below.

Applicant:	
P	RODUCE WHOLESALE, INC
Address:	
	MARKET CITY, STATE
Shipper:	
	PRODUCE SHIPPER, INC.
Address:	
	SHIPPING POINT, STATE
Insp. Site:	
	APPLICANT'S STORE

If an applicant has more than one facility, enter the locally accepted name of the facility, such as "Applicant's Warehouse #1," "Plant #3," "Main Store," etc. as shown below. In such cases it will not be necessary to enter the city and state again.

Applicant:	
	CHAIN STORE CO., INC
Address:	
	SOMEWHERE, STATE
Shipper:	
	SUPER SHIPPERS, LLT.
Address:	
	ANYWHERE, STATE
Insp. Site:	
APPLI	CANT'S OHIO WAREHOUSE #3

If the inspection site is different from the previous "Applicant" information, record where the inspection was performed and the city and state of the inspection site as shown below.

Applicant:
PRODUCE IMPORTERS, INC
Address:
PORT CITY, STATE
Shipper:
TROPICAL FRUIT BROKERAGE
Address:
PORT CITY, STATE
Insp. Site:
INTERNATIONAL AIRPORT, STATE

Effective Date: March 2015 Page 10 of 112

If the product(s) being inspected are located at two or more different sites, even though they may be part of the same shipment and for the same applicant, treat the product at each site as a separate inspection and certify on separate certificates.

Carrier or Lot Identification

Enter the appropriate information in each portion of the "CARRIER OR LOT ID" block (prefix, number, state when applicable) whenever a carrier or license number is available. Enter this information here regardless of whether or not you observed the conveyance or license number.

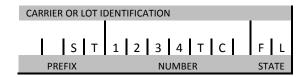

Examples:

Railcar marked UPFE 456789: "UPFE" is the prefix, "456789" are the numbers, and the state category is left blank.

Trailer with License Plate ST 1234TC Florida: "ST" is the prefix, "1234TC" are the numbers and "FL" is the state.

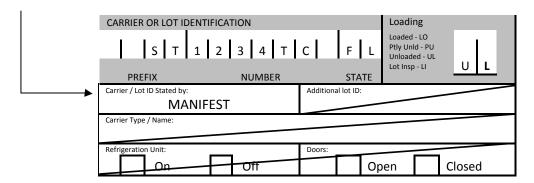

When the prefix or the number contain less than the number of letters or digits allotted for them on the certificate, it makes no difference which of the allotted spaces are used to enter the information. In the example above the prefix "ST" may be entered in the first two spaces for prefix or in the last two.

Effective Date: March 2015 Page 11 of 112

In instances when you cannot see the conveyance number or license plate number, complete the "Carrier / Lot ID Stated By:" section by showing the name of the source providing the information.

If a carrier or license number is not available but other identification assigned by the applicant is available, such as a Purchase Order number, Lot number, or Bill of Lading number, etc., then enter as appropriate "LOT" or "PO" or "B/L" in the "PREFIX" block and enter the number in the "NUMBER" block. Enter this information in this block only when the lot(s) is unloaded and the carrier or license plate number is not available. Whenever the number of digits and/or letters entered in the "number" block exceeds seven, then enter the first seven numbers or combination of numbers and letters.

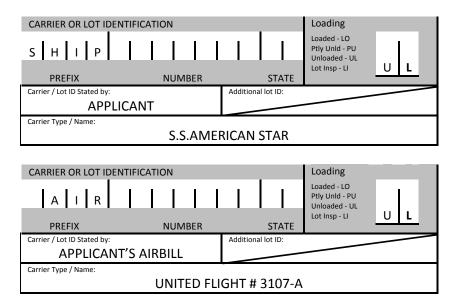

NOTE: Never enter Positive Lot Identification (PLI) numbers in this section of the certificate, which is reserved for carrier identification or applicant's/receiver's identification. See the sections on Brand/Markings and Lot ID for instructions on entering PLI numbers.

Examples of prefix numbers:

<u>L O T</u> _	1234 = Lot number 1234.
<u>P O</u>	$5 \underline{6} \underline{7} \underline{} \underline{} \underline{} \underline{} = Purchase Order number 567.$
$\underline{\mathbf{B}} / \underline{\mathbf{L}}$	8912345 = Bill of Lading number 8912345.
<u>R E F</u> _	3219 = Reference number 3219.
<u>S I N</u> _	765432 = Shipper's invoice number 765432.
MAN	1 9 8 7 1 = Manifest number 19871.

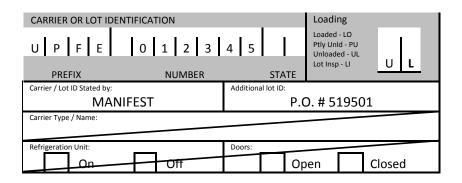

Effective Date: March 2015 Page 12 of 112

When the carrier is a ship or an airplane, use "SHIP" or "AIR" in the "PREFIX" block and give the full name of the ship, vessel, or the number of the air bill, sea container, or flight number in the "Carrier Type / Name" block. Also include the source of the information in the "Carrier / Lot ID Stated by:" block as shown below.

If you are able to read the license plate, railcar number, ship name, etc., enter "Inspector" in the "Carrier / Lot ID Stated by:" block (see <u>Loading</u> and <u>Carrier Lot ID Stated By</u> sections).

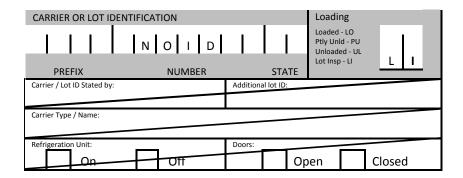

In the interest of more complete certification, if any other lot identifications (other than PLI) are given in addition to the carrier or license number, show them in the "Additional Lot ID" block.

Effective Date: March 2015 Page 13 of 112

If no form of identification is available, enter "NOID" in the "PREFIX" or "NUMBER" sections of the "CARRIER OR LOT IDENTIFICATION" block and draw a line through the "Carrier / Lot ID Stated by:" and "Additional Lot ID:" blocks.

Example:

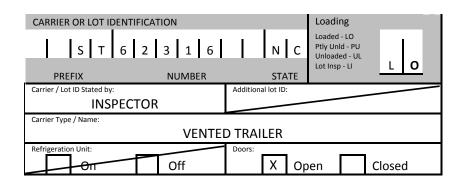

NOTE: Make every effort to obtain some form of identification on the lot such as conveyance number, license number, applicant's lot number, purchase order number, bill of lading number, etc., as such identification increases the certificate value to all financially interested parties.

Loading

Enter one of the two letter codes to denote whether the load or lot(s) being certified is loaded, partly unloaded, unloaded, or is a lot inspection. **Never leave this block blank.**

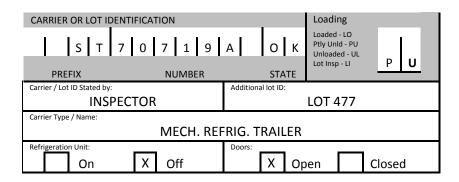

LOADED (code LO) means that the entire lot or lots being certified are observed on the conveyance by the inspector. The load may or may not be in the process of being unloaded during the inspection, but you must see the entire lot on the conveyance prior to the beginning of the unloading process to classify as loaded.

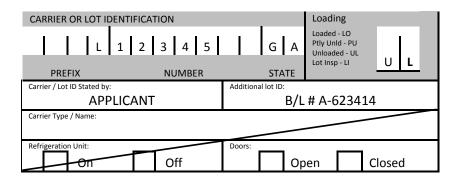

Effective Date: March 2015 Page 14 of 112

PARTLY UNLOADED (code PU) means the lot(s) being certified has been partly unloaded. This will always indicate that there will be at least two lots for certification purposes, a loaded lot and an unloaded lot. There may also be more than one loaded and/or unloaded lot. Identify such loaded and unloaded lots separately in the "LOT ID" blocks, which are discussed later.

Example:

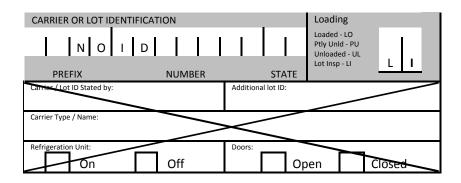

UNLOADED (code UL) means that the lot(s) being certified is entirely unloaded at the time of inspection. Use this code only when a lot identification number or carrier number is entered in the "CARRIER OR LOT IDENTIFICATION" block.

Effective Date: March 2015 Page 15 of 112

LOT INSPECTION (code LI) means that the lot(s) being certified is not on the conveyance at the time of inspection and no identification of the lot or load is available (enter "NOID" in the "CARRIER OR LOT IDENTIFICATION" block). Never use the code (LI) whenever there is any lot identification available for the lot(s).

Example:

The "CARRIER OR LOT IDENTIFICATION" block pertains to the product or products being inspected and certified at the time and date indicated. It does not refer to product(s) which may have been on the same load at one time but were unloaded at another place or time, and are not being inspected and certified as part of the current inspection.

SENARIO: An applicant calls for an inspection on 400 cartons of lettuce.

You arrive to find a half of a load of lettuce (400 cartons) on a trailer, but the driver says 400 cartons of the same lettuce were unloaded somewhere else. The "Loaded" (LO) code should be entered, since the entire requested lot for inspection (400 cartons) is on the trailer. The 400 cartons previously unloaded have no bearing on this entry and are not part of this inspection and certification.

If you arrive to find 300 cartons on the trailer and 100 cartons on the dock and are told the 100 cartons is from the same trailer, enter the "Partly Unloaded" code (PU) and show two lots, a loaded lot and an unloaded lot, in the "LOT ID" section. In this case, keep separate samples for each lot on the notesheet and enter separate results on the certificate (see example certificate numbers 2, 5 and 7).

Carrier / Lot ID Stated By

Use this block to report the source of the information shown in the "CARRIER OR LOT IDENTIFICATION" block. The source of carrier numbers may be, but is not limited to, any of the following:

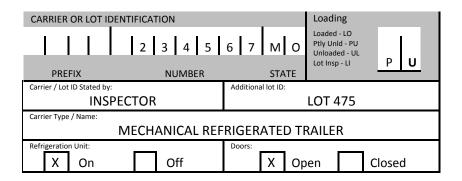

- Applicant
- Shipper
- Broker

Effective Date: March 2015 Page 16 of 112

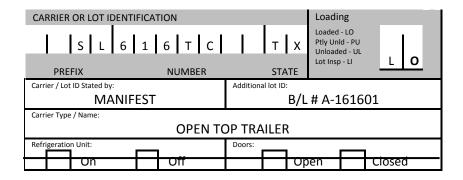

- Carrier's agent
- Manifest
- Bill of Lading
- Purchase order
- Inspector

Whenever the load is certified as loaded (LO) or partly unloaded (PU), make every effort to personally observe the conveyance number or license plate number. This may involve climbing down from the dock to try to see the number or asking the driver to pull the trailer forward. When the number is still not visible, show in this block the source of the carrier number with a statement in the "REMARKS" section as follows: "Trailer license not accessible at time of inspection." Whenever the load is certified as loaded or partly unloaded and you are certifying the carrier number, write the word "Inspector" in this block.

Example:

When the load is certified as loaded (LO) or partly unloaded (PU) and you cannot visually certify the carrier number, or when the load is certified as unloaded (UL) and the carrier number is reported in the "CARRIER OR LOT IDENTIFICATION" block, record the source of the carrier number in the space provided.

Effective Date: March 2015 Page 17 of 112

Additional Lot ID

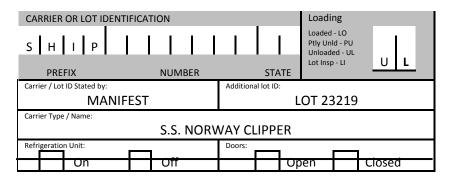

When additional lot identification other than PLI or carrier numbers is available, or when requested by the applicant, show such identification (P.O. No., Lot No., B/L No., etc.) in this block. If this block is not used, draw a line through the block.

Carrier Type / Name

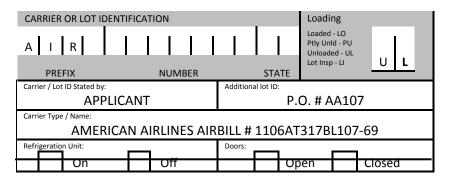

Enter the type of carrier when the load is loaded or partly unloaded. Carriers used for shipping fresh fruits and vegetables may be described in a number of ways. Some examples are open top trailer, insulated box car, open ventilated trailer, mechanical refrigerated trailer, refrigerated railcar, etc. If any distinctive type or carrier is used, the special name may be given provided it is an official name registered with the transportation company.

If the inspection covered an unloaded lot from a ship or an air shipment, enter the complete name of the ship, the air bill number, or the flight number as applicable. If the inspection covered an unloaded lot from any type of carrier other than a ship or airplane, or covered a lot inspection, draw a line through this block.

Example of a SHIP:

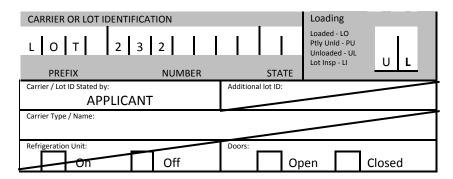

Example of an AIR SHIPMENT:

Effective Date: March 2015 Page 18 of 112

Example of an UNLOADED LOT:

Refrigeration Unit/Doors

When the product is inspected on the carrier and the carrier has a refrigeration or temperature control unit, mark the appropriate block indicating whether the refrigeration unit was "on" or "off" at the time of the inspection. Also check whether any doors (side or rear) were "open" when you arrive; if no doors were open, check "closed."

Other Carrier or Load Information

Report situations, such as open or closed vents, load dividers, top ice, heaters, holes in walls or doors, damage to the insulation, load shifts, or any other factor which could affect the condition of the product. Whenever you believe one or more of these items are important, report them in "REMARKS," or any unused space in the "OFFSIZE/DEFECTS" and/or "OTHER" sections. When they have no bearing on any condition problems found during the inspection, these items may be reported on the notesheet but not on the certificate.

Temperature

Take pulp temperature of products and report them on all lots inspected for quality and/or condition, whether unloaded or loaded, or in refrigerated or non-refrigerated locations. When two or more lots are being certified, report the highest and lowest temperatures for <u>each lot</u> in the "TEMPERATURE" block of the certificate. When certifying multiple lots (A, B, C, and/or D), do not combine the temperatures of the lots, but report the high and low temperatures for each lot.

Although most of the temperatures taken will usually be recorded only on the notesheet and the range recorded on the certificate, report instances of unusually high or low temperatures or extreme ranges of temperatures, which may have an important bearing on the condition of the product, in greater detail in "REMARKS," or any unused space in the "OFFSIZE/DEFECTS" and/or "OTHER" sections of the certificate.

Effective Date: March 2015 Page 19 of 112

See examples below and example certificate number 16:

_		
	OFFSIZE/DEFECTS	
%	TEMPERATURES: 63 TO 70°F IN OUTER CARTONS OF PALLET AND 40 TO 46°F	
%	N CENTER OF PALLET.	
	OFFSIZE/DEFECTS	
%	TEMPERATURES: TWO PALLETS IN APPLICANT'S COOLER: 35 TO 37°F	
%	THREE PALLETS ON LOADING DOCK: 59 TO 64°F IN OUTER CARTONS AND	
%	44 TO 50°F IN CENTER OF PALLETS.	

NOTE: Record all temperatures on the certificate and notesheet to the nearest whole degree. Round to the next higher degree readings from digital thermometers ending in ".5" or higher, and round downward those ending in ".4" or lower.

Product

Show the common name of the commodity under this heading. When applicable, the type may also be shown under this heading, or when clearer or more convenient, it may be shown in the "BRAND/MARKINGS," "ORIGIN" or "LOT ID" blocks as appropriate. The type may be indicated in the "PRODUCT" block, but as a general rule, do not state variety in this block.

TIP: If you are having difficulty knowing how to report the name of a commodity (i.e. "Sweet Peppers" or "Peppers, Sweet") refer the guidelines in the commodity inspection instructions. If still unclear, look up the title of the standards.

Product:	Product:	Product:
LEAF LETTUCE, RED	BGG ONIONS, YELLOW	TABLE GRAPES
ICEBERG LETTUCE	NORTHERN ONIONS, RED	TOMATOES
NECTARINES	CABBAGE, DANISH	TOMATOES ON THE VINE
SWEET CHERRIES	SQUASH, SUMMER	GRAPE TOMATOES
Product:	Product:	Product:
Product: SPINACH LEAVES	POTATOES, MIXED	Product: BROCCOLI, CROWNS
SPINACH LEAVES	POTATOES, MIXED	BROCCOLI, CROWNS
SPINACH LEAVES APPLES, RED GREENHOUSE	POTATOES, MIXED POTATOES, RUSSET	BROCCOLI, CROWNS BROCCOLI, FLORETS

Effective Date: March 2015 Page 20 of 112

The following commodities will always identify one of the types as shown in the following table in addition to the product name, but, as stated previously, the type does not necessarily have to be shown in the "PRODUCT" block:

<u>PRODUCT</u> <u>TYPE</u>

Apples: Red, Yellow, Green

Broccoli: Bunched, Crowns, Florets

Cabbage: Domestic, Danish, Red, Savoy

Cucumbers: Fresh, Pickling, Greenhouse

Grapefruit: California, Florida, Texas

Lettuce: Iceberg, Boston, Red Leaf, Green Leaf, Butter

BGG Onions: Yellow, White, Red, Brown, Mixed Color

Northern Onions: Yellow, White, Red, Brown, Mixed Color

Oranges: California, Florida, Texas

Sweet Peppers: Red, Yellow, Orange, etc.

Potatoes: Round White, Round Red, Long White, Russet, Mixed

Spinach: Plants, Leaves, Bunched

Squash: Summer, Winter Tangerines: Florida, Other

Tomatoes: Fresh, Cherry, Plum, Grape, Greenhouse, On the Vine

On domestically grown Grapefruit, Oranges, and Tangerines, it is not necessary to enter the type in the "PRODUCT" block since the type can easily be captured from the "ORIGIN" block. If the origin is foreign, enter (C), (F), or (T) after the product name to indicate the type as California, Florida, or Texas based on which standard is used.

Product:	Brand/Markings:	Ori	gin
TANGERINES (F)	"DESERT DELIGHT" 30 COUNT	М	R
ORANGES (C)	"JUNGLE GROWN" VALENCIA 72 CT	В	Z

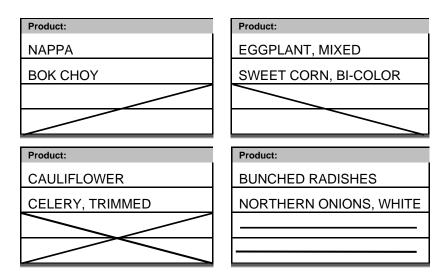

Effective Date: March 2015 Page 21 of 112

On Squash, enter the common name of the product (Zucchini, Acorn, etc.) in the BRAND/MARKINGS" or "LOT ID" blocks, **not** in the "PRODUCT" block.

Example:

Product:	Brand/Markings:	Ori	gin
SUMMER SQUASH	"LUCY'S BEST" ZUCCHINI, MEDIUM	F	L
WINTER SQUASH	"LUCY'S BEST" ACORN, 40 LBS	G	Α

Cross out all lines that are not used under the "TEMPERATURE," "PRODUCT," "BRAND/MARKINGS," "ORIGIN," "LOT ID" or "NUMBER OF CONTAINERS" headings by using one of the methods shown below.

When practical, do not mix and match methods in this section of the certificate. Instead, whatever method you use, have lines in this section of the certificate <u>flow in the same direction</u> as shown below. Apply this principle for the entire certificate.

Product:	Brand/Markings:	Ori	gin	Lot ID:	Number of Containers:	Insp count
POTATOES, MIXED	"JEWEL MIX BRAND" 10/5 LB.	1	D	RED/WHITE/YELLOW	200 MASTER SACKS	Υ
POTATOES, MIXED	"JOE'S SPECIAL" U.S. NO. 1. 5/10 LB.	1	D	LONG WHITE, RUSSET,	100 CARTONS	Υ
				ROUND RED		

Brand/Markings

Always have the brand name be the first entry in the block and enclose it in quotation marks. **Do not enclose other markings in quotations.** Enter other key markings as necessary to properly identify the lot for certification.

Effective Date: March 2015 Page 22 of 112

When the certificate contains less than four lots for certification, use the additional line(s) in this block for additional markings as needed. If additional space is needed when certifying multiple lots, use the adjacent "LOT ID" block. You may also continue under "REMARKS," or any unused space in the "OFFSIZE/DEFECTS" and/or "OTHER," sections.

All container markings need not be shown on the certificate; only those markings necessary to identify the lot being certified. Show all markings on the notesheet which could have a bearing on possible misbranding cases. Such markings may be, but are not limited to, weight or count, size, variety, grade, and state of origin or country (if imported). If misbranding is actually indicated by the inspection, the marking(s) which cause the lot to be misbranded must be shown on the certificate in the Brand/Markings block.

Example:

Brand/Markings:	Ori	gin
"BUD" 24 HEADS	С	Α
"GREEN GIANT" U.S. NO. 1, 5 LBS.	I	D
"BLUE ANCHOR" (SEE REMARKS)	W	Α
"DAVID DEL CURTO" 18 LBS. FLAME	С	Е

A. No Brand

When there are no brands, report "No Brand" using quotation marks. Generic markings such as Florida Vegetables or Fresh Vegetables are not registered trademarks and are not brands; therefore, enter "No Brand" for these types of packages unless they have a sticker, inserted label, or stamp otherwise indicating a brand.

In order to identify the lot whenever "No Brand" is entered, always enter the name of the shipper if printed or stamped on the package. In rare cases, when there are no distinguishing container markings, enter "No Marks" enclosed in quotations.

Brand/Markings:	Ori	gin
"NO BRAND" VALLEY FARMS LG	G	Α
"NO MARKS"	Р	Α

Effective Date: March 2015 Page 23 of 112

B. Positive Lot ID (PLI)

Positive Lot Identification (PLI) consists of Federal and/or Federal-State lot stamps and other forms of approved identification, the accountability and control of which meet guidelines established by the SCI Division. State inspection lot stamps or other stamps which do not reference Federal or Federal-State inspection are not PLI and will not be listed as PLI marks on the certificate or the notesheet; however, show them as additional identifying marks on the notesheet and/or certificate. PLI markings are often the most important of the other markings on the container.

Always note the presence of PLI marks on the certificate.

If only one or two PLI numbers are noted during the inspection, show them on the certificate in the "BRAND/MARKINGS" block, space permitting, or in the "LOT ID" block. If the inspection results are reported separately by PLI marks, then the PLI numbers are entered for each lot in the applicable "LOT ID" block. If three or more PLI numbers are present but are not used to report results separately, then enter the term "See Remarks" or "See Below" in the "BRAND/MARKINGS" or "LOT ID" blocks and list all of the PLI numbers from which samples were drawn in the unused space in the "REMARKS" or "OFFSIZE/DEFECTS" sections. If any PLI marks are illegible, indicate the fact on the certificate.

Some shipping point areas insert or attach consecutively numbered PLI tags into packages, particularly sacks of potatoes and onions. When these markings are recognized as such during a market inspection, enter "See Below" or "See Remarks" in the "BRANDS/MARKINGS" block. Then enter a statement in the unused space in the "OFFSIZE/DEFECTS" section or the "REMARKS" section, similar to the following: "Consecutive PLI numbers ______through _____ noted." Enter the smallest number and the highest number noted during the inspection.

Regardless of how the entry is made on the certificate, <u>always record all PLI</u> <u>marks in the "PLI Number" column on the notesheet to indicate the PLI number of each sample</u>. Documenting PLI numbers is very important in cases of appeal inspections or other instances where it becomes necessary to separate the lots for certification purposes because of differences in quality or condition.

Effective Date: March 2015 Page 24 of 112

Example:

Brand/Markings:	Ori	gin	Lot ID:		
"ABC" EX LG, FL-10236, FL-10237	F	L	FL-10238, FL-10239		
"XYZ" 70, 80, 90, 100. 120 SIZE	ı	D	SEE BELOW		
"HYLAND" VALENCIA, 72 CT	С	Α	FED STATE CA-765435		
"HYLAND" VALENCIA, 72 CT	С	Α	FED STATE CA-765432		

Origin

Enter the two letter abbreviation of the state or country (if imported) of origin for each lot certified. <u>Use "OT" when the origin is unknown</u>.

For produce inspections from Canada, enter the abbreviations for the province of origin if the information is clearly stated on either the container or manifest. If the container markings or the manifest do not clearly state the province of origin, enter "CN" for Canada.

NOTE: Refer to APPENDIX 1: ORIGIN CODES for a complete list of approved abbreviations for states, Canadian provinces, and foreign countries.

Lot ID

Use this block to further add to the identification of the lot inspected, or to distinguish between lots or sublots for certification purposes.

Example:

Product:	Brand/Markings:	Ori	igin	Lot ID:
ICEBERG LETTUCE	"BUD" 24 HEADS	С	Α	FILM WRAPPED
NORTHERN ONIONS, YELLOW	"BIG BULBS" U.S. NO. 1, 50 LBS.	0	R	COLOSSAL
PEARS	"BLUE ANCHOR" D'ANJOU, 20 LBS.	С	Α	FED STATE CA-298456
POTATOES, RUSSET	"TOP HAT" U.S. NO. 1, 70/80/90 SIZE	Ι	D	ID - 98765432

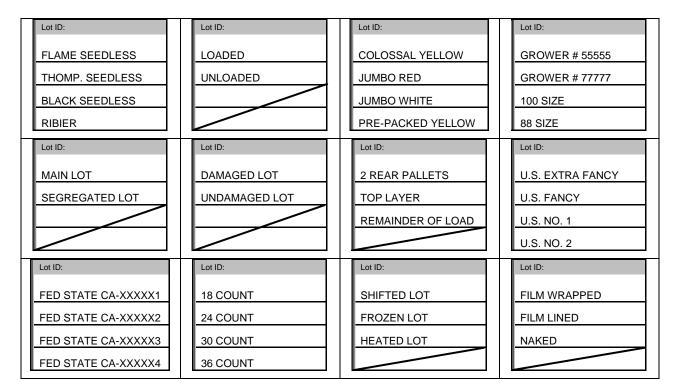

The certificate will accommodate up to 4 lots, designated as lots A, B, C, and D, with complete details on grade and condition factors for each. Whenever the "PRODUCT" and "BRAND/MARKINGS" entries are otherwise the same (e.g., four lots of table grapes with all the same brand), the "LOT ID" block may be used to further separate and identify which lots or portions of lots are being certified as lots A, B, C, and D. Once identified on this line, use the A, B, C, and/or D designations throughout the remaining portions of the certificate when referring to those lots.

Whenever more than four lots are certified on one inspection, use the lot designations A, B, C, and D on each continuation certificate, not E, F, G, etc.

Effective Date: March 2015 Page 25 of 112

Lot separations may be made at the applicant's request or by you in the interest of formulating a clearer picture of the product being certified. The following are different entries which could be entered in this block to distinguish different markings, different sizes designated by the applicant, different types of packages, different PLI numbers, different parts of a load, etc.

Examples:

Number of Containers/Inspector's Count

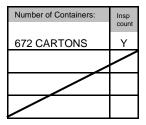

Enter the number of containers in the lot or portion of lot inspected (or weight for bulk loads), and enter the type of package or container in which the produce was shipped. When containers are of the standard types commonly used for the product, describe them as "lugs," "crates," "baskets," "sacks," "flats," "cartons," etc. When products are shipped in unusual containers or in variations of a common type of container, a further description is necessary, such as "foam lugs," "plastic crates," etc. Do not abbreviate types of containers on the certificate (it's OK to do so on the notesheet).

"Certify" to all statements made, since the certificate is prima facie evidence in court. Make every effort to accurately count the containers. In the "Insp count" block, enter "Y" (yes) when you have accurately counted the containers. When it is not possible to do so, enter "N" (no) in the "Insp count" block and report the reason for not being able to count the containers in the "REMARKS" section. Never leave this block blank.

Effective Date: March 2015 Page 26 of 112

Report the number of packages remaining at the time of inspection, not the amount originally manifested. Report the quantity covered by your inspection and not the amount shown on the manifest. If the amounts differ, the original amount shown on the manifest may be reported under "REMARKS" at applicant's request.

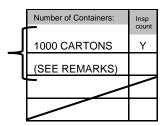

Examples:

REMARKS: APPLICANT STATES THE ORIGINAL COUNT WAS 1200 CARTONS

When lots are mixed and must be certified separately because of differences in quality or condition, and the manifest does not show the count for the different lots, it is permissible to show the combined (total) count of the lots with a reference to "See remarks." In the "REMARKS" section give an explanation for not providing separate lot counts and, if possible, report in general terms the approximate amount for each lot.

Examples:

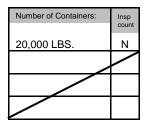

REMARKS: LOTS NOT ITEMIZED AS TO SIZE AND MIXED ON PALLETS. MOST

CARTONS MARKED 12 OR 15 COUNT, SOME MARKED 9 COUNT.

Effective Date: March 2015 Page 27 of 112

Do not attempt to certify as "Insp count" the quantity of a load of bulk products. When necessary, report the measurements of the length, width, and/or height of the load or pile, or state the approximate number of pounds. For bulk inspections, enter "N" (no) in the "Insp count" block.

Example:

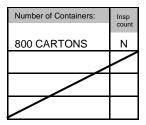

REMARKS: BULK LOAD OF POTATOES. INSPECTION RESTRICTED TO UPPER 12 TO 18 INCHES OF LOAD.

In rare occasions when the product is:

- Unloaded
- Not going to be made accessible (restricted)
- No record is available showing the definite quantity

Enter "N" (no) in the "Insp count" block and show the approximate amount, provided the load is intact. In the "REMARKS" section show the number of visible rows, layers, and stacks used to make the approximation.

Example:

REMARKS: NO LOT COUNT AVAILABLE. ESTIMATED LOT COUNT BASED ON VISIBLE PORTION OF LOAD SHOWING

10 LAYERS, 4 ROWS, AND 20 STACKS. INSPECTION RESTRICTED TO 2 PALLETS NEAREST REAR DOORS.

Effective Date: March 2015 Page 28 of 112

DESCRIBING THE PRODUCT

The primary purpose of the inspection is to describe, as applicable, the size, quality, and condition of the produce. Report these inspection results under the headings, "OFFSIZE/DEFECTS" and "OTHER." List size factors, quality defects, and condition defects in a clear, concise, specific, and factual manner in the "OFFSIZE/DEFECTS" section. Show any further descriptions of these factors in the "OTHER" section.

This portion of the certificate will typically list, from left to right:

- The lot designations from above when more than one lot is certified;
- The average percentage of each size factor and or defect found;
- The simple name of the size factor or defect described on that line; and
- Any "Other" pertinent information relating to size, quality, or condition.

Lot

Whenever more than one lot is certified on a certificate, identify all of the information for each lot by a letter designation "A," "B," "C," or "D." This letter designation is written in the space provided under "LOT" next to the first line of information for each lot. To separate the lots, draw a solid line neatly across the "LOT" column immediately under the last line entry of each lot. When there is only one lot on the certificate, leave the "LOT" space blank. Also, when more lines are needed for defects, it is not necessary to skip a space between lots.

_		Indudin-	Industin

Effective Date: March 2015 Page 29 of 112

Average Defects Columns

Do not report percentages of color classifications for tomatoes, percentage of moisture content for nuts, percentage of soluble solids, or the blush color of apples, peaches, etc.; report these in the "OTHER" section of the certificate. Only report exact whole percentages of <u>defects</u> and/or offsize in the "AVERAGE DEFECTS" column, except as noted in the following paragraph.

Less than whole percentages (e.g. "-1/2," ".07") may be reported on the certificate when reporting small amounts of decay and/or soft rot, or when reporting percentages for nuts and other commodities having standards or inspection instructions that require the determination and reporting of percentages in tenths and/or hundredths (see example certificate numbers $\underline{19}$ and $\underline{20}$).

In the first column, enter the average percentage for the defect or size factor listed on the same line in the "OFFSIZE/DEFECTS" area. Include leading zeroes so that <u>all averages contain at least two digits</u>. If the percentage is a single number, precede the number with a zero. When the average defects reported include percentages affecting the next more restrictive tolerance or the next more serious degree defined in the standard, report those percentages in the adjacent column(s) provided.

Carry over decay, soft rot, or soft to the serious damage column (and very serious damage column, when applicable), even if no other serious damage is reported. However, <u>do not use the serious damage column if the standards do not have a definition for serious damage (garlic, mushrooms, spinach leaves, etc.)</u>. At the top of the column(s), designate the degree of the more restrictive tolerance (i.e. "SER. DAM," "V.S. DAM," etc.) by marking out the heading(s) which do not apply.

Mark out all inapplicable headings over columns and cross out all unused columns.

6CHECKSUM

16

L O T	AVERAGE DEFECTS	Including DAMAGE SER. DAM	SER. DAM. V.S. DAM	OFFSIZE/DEFECTS
	06 %	00 %	\ /%	BRUISING (4 to 8%)
	02 %	02 %	« X %	DECAY (0 TO 5%), EARLY STAGES
	08 %	02 %	%	CHECKSUM
-	90	9(%	
\circ	AVERAGE DEFECTS	Including DAMAGE SER. DAM	Including SER: DAM. V.S. DAM	OFFSIZE/DEFECTS
	10 %	10 %	6 10 %	SOFT (4 TO 15%)
	06 %	06 %	06 %	DECAY (0 TO 14%) ADVANCED STAGES

Effective Date: March 2015 Page 30 of 112

When inspecting commodities with no U.S. standards (NOGS), report the percentages of defects in the "AVERAGE DEFECTS" (first) column and cross out the second and third defects columns. Do not cross out the word "DEFECTS" in the "AVERAGE DEFECTS" column or rename this column when inspecting NOGS (see following example and example certificate number 3).

\circ	AVERAG DEFECTS		DAM SER. I	AGE	-5	includ SER. D V.S. D	AM	.	OFFSIZE/DEFECTS	
	04	%			%	/		%	BROWN SURFACE DISCOLORATION AFFECTING 10 TO 25% OF SURFACE	
	02	%			%	$\overline{}$	$\overline{}$	%	DECAY	
	06	%			%		1	%	CHECKSUM	
-		%			76			%		

In cases when an inspection covers multiple lots applying different grades to each lot, it is permissible to skip a space between lots and re-designate the degree of restrictive tolerances by entering the correct heading in the applicable column (see example certificate numbers $\underline{6}$, $\underline{30}$, and $\underline{37}$).

Example: Lot A: Apples based on U S. Extra Fancy Grade Lot B: Oranges (FL) based on U.S. No. 1 Grade

L O T	AVERAGE DEFECTS		Including DAMAGE SER: DAM		Including SER. DAM. V.S. DAM		OFFSIZE/DEFECTS

	10	%	07	%	05	%	CHECKSUM
_		%		%		%	
L							<u> </u>

The general policy is that factors which affect grade are reported in the "AVERAGE DEFECTS" and "OFFSIZE/DEFECTS" sections of the certificate. Quality and condition factors which do not affect grade are reported in the "OTHER" or "REMARKS" sections.

A. Allowances

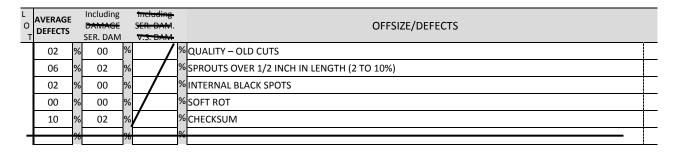

There are a few special situations which do not follow the rules as outlined above. These include allowances such as sprouting on potatoes and staining on onions, which are not scored on the basis of individual specimens, but rather on whether or not the lot as a whole is damaged.

Effective Date: March 2015 Page 31 of 112

1. Sprouts on Potatoes

Sprouts on potatoes affects the U.S. No.1 grade when more than 5% of the potatoes have sprouts over 1/2 inch in length or clusters of sprouts materially affecting the appearance of the potato. Therefore, when the lot is damaged by sprouts (more than 5%), report the percentage of all sprouts over 1/2 inch in length or clusters materially affecting the appearance in the "AVERAGE DEFECTS" column (see example certificate number 4).

Examples:

GRADE: FAILS TO GRADE U.S. NO. 1 ACCOUNT CONDITION (SPROUTS).

If scorable sprouts do not exceed the 5% allowance, do not report percentages unless requested by the applicant. When requested by the applicant, report the percentages in the "OTHER" section as follows:

0	AVERAGE DEFECTS		Including DAMAGE SER. DAM		SER. DAM. V.S. DAM	OFFSIZE/DEFECTS	OTHER
	02	%	00		/%	QUALITY – OLD CUTS	0 TO 8%, AVERAGE 4%
	02	%	00	%	7	INTERNAL BLACK SPOTS	SPROUTS OVER 1/2 INCH IN
	02	%	02	%	7	SOFT ROT, EARLY STAGES	LENGTH, NOT AFFECTING GRADE,
	06	%	02	%	/ %	CHECKSUM	PERCENTAGES REPORTED AT
_		%		%	20		APPLICANT'S REQUEST.

GRADE: U.S. NO. 1

Effective Date: March 2015 Page 32 of 112

Even when sprouts are not scorable or do not exceed the allowance, describe them in general terms in the "OTHER" section (see example below).

	OTHER
33	MOST SAMPLES SHOW SPROUTS
8_	RANGING FROM BARELY VISIBLE
33_	TO 1/2 INCH IN LENGTH, SOME
}}	SAMPLES SHOW NONE, NOT
8 <u> </u>	AFFECTING GRADE.

2. Staining on Onions

Whenever a lot of onions is damaged by staining, report the percentage of appreciably stained (or worse) onions in the "AVERAGE DEFECTS" column and include the percentage of badly stained onions in the serious damage column (do not report the percentage of slightly stained onions). When staining is present, but not to the extent that the lot is damaged, do not mention staining in the "AVERAGE DEFECTS" column or the "OFFSIZE/DEFECTS" section of the certificate, but rather report it in a narrative in the "OTHER" section of the certificate (see example certificate number 5).

Apply the same policy as outlined above for sprouting and staining to other factors which are scored on a lot basis and for which an additional allowance is made before the lot is considered damaged.

B. Reporting Bitter Pit and Jonathan Spot on Apples

The U.S. Standards for Apples provide in the U.S. Extra Fancy, U.S. Fancy, and U.S. No. 1 grades that the apples be free from Bitter Pit and Jonathan Spot. The U.S. Utility grade provides that the apples be free from serious damage by these defects. There is no definition in the standards for damage by either of those factors, but there is a restricted tolerance for serious damage in the top three grades. When certifying apples based on the U.S. Extra Fancy grade, enter the percentage of Bitter Pit or Jonathan Spot in the "AVERAGE DEFECTS" column and in the adjacent "DAMAGE" column. Even though, the apples are not technically damaged and there is no restricted tolerance for damage, they are defects of the U.S. Fancy and U.S. No. 1 grades as well as the U.S. Extra Fancy grade. In the third "SERIOUS DAMAGE" column, enter only the percentage of apples exceeding the definition of serious damage in the standards (see the following example and example certificate number 6).

Effective Date: March 2015 Page 33 of 112

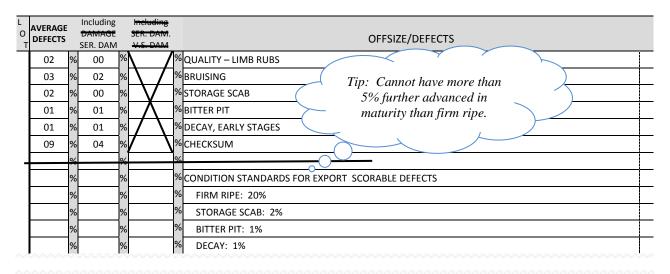

Example: Lot A is U.S. Extra Fancy and Lot B is U.S. Fancy.

()	AVERAGE DEFECTS		Including DAMAGE SER. DAM		Including SER. DAM. V.S. DAM		OFFSIZE/DEFECTS	
A.	12	%	12	%	05	%	BITTERPIT (8 TO 20%)	
	00	%	00	%	00	%	DECAY	
	12	%	12	%	05	%	CHECKSUM	
-		%		%		%		_
В.	DAM	%	S.DAM	%		%		_
	10	%	06	%	\ /	%	BITTERPIT (4 TO 18%)	
	00	%	00	%	X	%	DECAY	_
	10	%	06	%		%	CHECKSUM	
4		%		%		%		_

C. <u>Condition Standards for Export (Apples)</u>

When an inspection is requested to determine compliance with the U.S. Condition Standards for Export, report the percentages of defects which are scorable against the "Condition Standards for Export" in the "OTHER" or unused space in the "OFFSIZE/DEFECTS" sections. The "AVERAGE DEFECTS" columns will show the percentages of defects for the <u>grade standards</u>, not the percentage of defects of the Condition Standards for Export.

Examples:

GRADE: U.S. NO. 1. FAILS TO MEET CONDITION STANDARDS FOR EXPORT ACCOUNT FIRMNESS.

REMARKS: CONDITION STANDARDS FOR EXPORT REPORTED AT APPLICANT'S REQUEST.

Effective Date: March 2015 Page 34 of 112

D. Certifying Combination Grades

When certifying apples on a Combination U.S. Extra Fancy and U.S. Fancy grade, enter all U.S. Extra Fancy grade defects in the first "AVERAGE DEFECTS" column, all U.S. Fancy grade defects in the second "DAMAGE" column, and all serious damage defects in the third column. Apply the same policy when certifying apples on any other combination grade or when certifying other commodities to combination grades (see example certificate number 6).

E. Certifying Condition of Pre-cut and Salad Products

When certifying these types of products such as shredded lettuce, tossed salad mixes, cole slaw mixes, etc., enter only the total defects in the "AVERAGE DEFECTS" column. Report range(s) and average(s) of pieces in the "OFFSIZE/DEFECTS" section (see example certificate number 7).

F. Terms Not to Use When No Established U.S. Grade

When there are no established U.S. Standards for a commodity, do not use the terms "Grade," "Defects," "Injury," "Damage," "Serious Damage," or "Very Serious Damage." Do not use descriptive terms such as "materially" or "seriously affecting appearance," as these are generally used in the general definitions of damage and serious damage. Describe the objectionable factors in terms of color, area affected, and depth, etc. (see example certificate numbers 3 and 8).

G. Checksum

The last entry in the "AVERAGE DEFECTS" columns for each lot is the checksum. The checksum does not represent the total defects in the lot and is never used for determining percentage of No. 1 quality or whether or not a lot grades or fails to grade. The checksum is simply a total of the numbers in the column. When all applicable defects/factors, such as tops and roots, external and internal, offsize, etc., are totaled, it is possible and permissible that the checksum may exceed 100.

NOTE: A checksum may or may not be necessary when certifying certain types of nuts, which require percentages to be reported to one or two decimal places (i.e. tenths and hundredths) (see example certificate numbers 19 and 20). When reporting percentages to tenths or hundredths of a percent, it will be necessary to calculate (but not report) the percentages to an additional decimal place to account for rounding.

Effective Date: March 2015 Page 35 of 112

When percentages on the notesheet or the "CHECKSUM" line on the certificate results in a whole number and a fraction, the following rules apply:

• When the fraction is .49% or less, round down the percentage to the next lower whole number, except when reporting decay or soft rot.

```
0.49% will not be reported (except for decay or soft rot) 1.49% will be reported as "1%" 10.37% will be reported as "10%"
```

• When the fraction is .50% or more, round up the percentage to the next higher whole number, except when reporting decay or soft rot.

```
0.50% will be reported as "1%" (except for decay or soft rot) 1.53% will be reported as "2%" 10.68% will be reported as "11%"
```

• When the average for decay or soft rot is less than 1%, use the following numerical symbols:

```
-1 = Less than 1% (if average is 0.51% to 0.99%)
1/2 = one half of 1% (if average is 0.50%)
-1/2 = Less than one half of 1% (if average is 0.49% or lower)
00 = No decay or soft rot
```

• When the lot or defect average is less than 1/2 of 1% in excess of the tolerance, drop the fraction in excess of the tolerance.

```
Tolerance is 10%. Lot averages 10.3%. Report "10%." Tolerance is 2%. Defect averages 2.4%. Report "2%."
```

TIP: If decay is applied against a tolerance other than the restricted tolerance for decay, peppers for example (stem decay is applied against the 5% serious damage tolerance), then do not report in fractions when less than one percent. Instead, round up to 1% when .50% or more and round down to zero if .49% or less.

Offsize/Defects

Use this section for identifying the Offsize/Defects by name or description and, when necessary, to show ranges. If more room is needed for descriptions, report in the "OTHER" section.

The proper line-by-line sequence to follow when reporting Offsize/Defects is as follows:

• Size (report here only when lot fails to meet size requirements or when applicant requests percentage of U.S. No. 1 quality)

Effective Date: March 2015 Page 36 of 112

- Quality (permanent defects)
- Condition
- Decay/Soft Rot
- Checksum

Follow the policy below for reporting ranges:

- Must show ranges when any lot or container tolerance, including restricted tolerances, is exceeded, or if any average exceeds 5%.
- Report ranges in this section, in parenthesis, immediately to the right of the name/description of the defect.
- When the defect is absent in at least 1 sample, report the range in the "OFFSIZE/DEFECTS" section as "0" to whatever the maximum number or percentage may be. If the applicant requests a further breakdown of ranges, report this in the "OTHER" section.

Effective Date: March 2015 Page 37 of 112

Example:

\circ	AVERAGE DEFECTS		Including DAMAGE SER. DAM		SEP. C	ΔΔΔ.		OFFSIZE/DEFECTS
A.	06	%	00	%			%	QUALITY – BROKEN MIDRIBS (0 TO 8%)
	12	%	04	%			%	TIPBURN (0 TO 29%)
	10	%	05	%	Х		%	RUSSET SPOTTING (0 TO 33%)
	04	%	04	%			%	DECAY (0 TO 8%), MOSTLY EARLY, SOME ADVANCED STAGES
	32	%	13	%			%	CHECKSUM
-		%		%			%	

Description of decay may also be entered in the "OTHER" section.

Example:

Ω	AVERAGE DEFECTS		Including DAMAGE SER. DAM		SER. DAM. V.S. DAM	OFFSIZE/DEFECTS	OTHER
Α.	06	%	00	%	/ %	QUALITY – BROKEN MIDRIBS (0 TO 8%)	LOT A: DECAY IS MOSTLY EARLY,
	12	%	04	%	\	TIPBURN (0 TO 29%)	SOME ADVANCED STAGES.
	10	%	05	%	X %	RUSSET SPOTTING (0 TO 33%)	
	04	%	04	%	/ \%	DECAY (0 TO 8%)	
	32	%	13	%	/ \\%	CHECKSUM	
_		%		%	%		

NOTE: The practice of reporting ranges on certain commodities in number of fruit or melons, some of which were followed by the percentages in parenthesis, is discontinued, except at applicant's request. Report all ranges in percentages (see section on Number of Fruit Examined/Defective Fruit).

Do not report ranges on bulk loads except when set sample sizes are specified by the standards or when requested by the applicant. Only one defect is allowed for each line except when grouping quality defects (see examples listed in the Quality section). Allow enough room on the line to include the defect name and the range if needed.

Show the percentages of size, quality, and condition defect/factors using the following guidelines:

A. Offsize

Size is only determined and reported when size is part of grade (exception: field grown tomatoes) or when requested by the applicant. When size is determined, report the percentage of offsize in the "OFFSIZE/DEFECTS" section when the lot fails to meet size requirements. Report percentages in the first column only.

Effective Date: March 2015 Page 38 of 112

For example: When undersize is exceeded in a lot of jumbo onions:

O	AVERAGI DEFECTS		Including DAMAGE SER. DAM		SER. DAM. V.S. DAM	OFFSIZE/DEFECTS	OTHER
A.	17	%	00	%	/ 9	UNDER 3 INCHES IN DIAMETER (8 TO 30%)	2-1/2 TO 4, MOSTLY 3 to 3-3/4
	01	%	00	%		QUALITY - CUTS	INCHES IN DIAMETER.
	02	%	00	%		BLACK MOLD BETWEEN SCALES	
	00	%	00	%		6 DECAY	
	20	%	00	%	/	6 CHECKSUM	
-		}					

When size requirements are met, <u>do not report offsize in the "AVERAGE</u> <u>DEFECTS" and "OFFSIZE/DEFECTS" sections</u> (see exception below). Instead, report a short narrative such as "Meets size as Marked" (e.g. potatoes, tomatoes) or "Undersize within tolerance" in the "OTHER" section.

For example: When undersize is not exceeded in a lot of jumbo onions:

\circ	AVERAGE DEFECTS		Including DAMAGE SER. DAM		SER. DAM. V.S. DAM		OFFSIZE/DEFECTS	OTHER
A.	01	%	00	%	/	%	QUALITY – CUTS	2-3/4 TO 4, MOSTLY 3 TO 4
	02	%	00	%		%	BLACK MOLD BETWEEN SCALES	INCHES IN DIAMETER.
	00	%	00	%		%	DECAY	UNDERSIZE WITHIN TOLERANCE.
	03	%	00	%		%	CHECKSUM	
_		%		%		%		

NOTE: An exception to the rule is when the applicant requests the percentage of U.S. No. 1 quality. Offsize is included in the percentage of U.S. No. 1 quality whenever the standards state that size is part of grade. In such a case, enter the percentage of offsize in the "AVERAGE DEFECTS" column.

When size requirements are met, the <u>percentage</u> of offsize may be reported in the "OTHER" section at applicant's request.

Example:

***************************************	OTHER
8	2-3/4 TO 4, MOSTLY 3 TO 4
33	INCHES IN DIAMETER. UNDERSIZE
8	RANGES 0 TO 8%, AVERAGE 5%;
3	NOT AFFECTING GRADE, REPORTED
8	AT APPLICANT'S REQUEST.

Effective Date: March 2015 Page 39 of 112

B. Quality

Show average percentage of defects at all times. Combine all quality defects into one average, except on commodities which have separate tolerances/allowances for different types of quality defects. Such commodities are potatoes with separate tolerances for internal and external defects, Florida citrus with separate tolerances for discoloration and other defects, and bunched commodities with separate tolerances for defects of roots and tops (see example certificate number 9). List the quality defects in descending order of prominence, most prominent to least prominent.

For example: Sweet peppers have an allowance of 10% for off-colored peppers (peppers not showing any amount of a specified color, e.g. green peppers in a red lot). Since the lot below shows 11% for off-colored peppers, the lot fails to grade. Therefore, the off-colored peppers are separated out from the other quality defects.

Example:

\circ	AVERAG DEFECTS		Including DAMAGE SER. DAM		SEK. D	Alvi.		OFFSIZE/DEFECTS	
	11	%	00	%			%	QUALITY – GREEN PEPPERS IN A RED LOT (4 TO 25%)	
	04	%	02	%			%	QUALITY – SCARS, PULLED STEMS	
	00	%	00	%		/	%	DECAY	
	15	%	02	%			%	CHECKSUM	_
-		%		%			%		_

NOTE: Do not combine an allowance with other quality defects. Always report an allowance on a separate line. When more than one allowance, report each on a separate line as shown in the following onion example.

0	AVERAGE DEFECTS		Including DAMAGE SER. DAM		I ncl SER. V.S.		л. Л.	OFFSIZE/DEFECTS
	36	%	00	%	\setminus	/	/ %	QUALITY – EXCESSIVE TOPS (20 TO 45%)
	25	%	10	%	abla	7	%	QUALITY – APPRECIABLY STAINED (14 TO 40%)
	02	%	00	%		X	%	QUALITY – CUTS
	00	%	00	%	7	7	9	DECAY
	63	%	10	%	7	,	\ \ °	СНЕСКЅИМ
_				H			7	

When an allowance is not exceeded, it may be reported in percentages or in general terms at applicant's request to give a clearer picture of the lot. When requested by the applicant, report them in the "OTHER" section as not affecting grade as shown in the following pepper examples.

Effective Date: March 2015 Page 40 of 112

Examples:

O	AVERAGE DEFECTS	E	ncluding DAMAGE ER. DAM	SEF	ludi t. D∕ s. D⁄	₩.	OFFSIZE/DEFECTS	OTHER
A.	04	%	02	%		/%	QUALITY – SCARS, PULLED STEMS	3 TO 14 %, AVERAGE 8% GREEN
	00	%	00	%	X	%	DECAY	PEPPERS IN A RED LOT, NOT
	04	%	02	%		\ %	CHECKSUM	AFFECTING GRADE, REPORTED AT
-		%		%		%		APPLICANT'S REQUEST.

	OTHER
8	MOST SAMPLES SHOW FEW TO SOME
§	GREEN PEPPERS IN A RED LOT.
8	MANY SAMPLES SHOW NONE, NOT
\$	AFFECTING GRADE. REPORTED AT
8	APPLICANT'S REQUEST.

C. <u>Condition</u>

Show average percentage of each defect at all times. Report all condition defects individually and in descending order of prominence (see tomato exception example below), with "Decay" or "Soft Rot" always reported as the last defect.

()	AVERAGI DEFECTS		Including DAMAGE SER. DAM		Including SER. DAM. V.S. DAM		OFFSIZE/DEFECTS	
	27	%	00	%	00	%	ABNORMAL COLORING (17 TO 35%)	
	15	%	05	%	00	%	BRUISING (12 TO 20%)	
	12	%	08	%	03	%	SKIN CHECKS (7 TO 17%) Tip: In tomatoes,	
	03	%	02	%	00	%	SUNKEN DISCOLORED AREAS (0 TO 8%) report soft just	
	04	%	04	%	04	%	SOFT o before decay.	
	06	%	06	%	06	%	DECAY (0 TO 11%), ADVANCED STAGES	
	67	%	25	%	13	%	CHECKSUM	
_	·	%		%		%		

Always make an entry for Decay or Soft Rot as applicable, even when the percentage is 00. See the following cabbage example.

Ω	AVERAG DEFECTS		Including DAMAGE SER. DAM		SER: DAN	₹1.	OFFSIZE/DEFECTS
	30	%	30	%		/ %	FRESH BURST HEADS (14 TO 40%)
	15	%	08	%		%	WORM INJURY/LIVE WORMS (10 TO 20%)
	10	%	08	%		%	NUMEROUS BLACK SUNKEN DISCOLORED AREAS (2 TO 18%)
	00	%	00	%	7	%	SOFT ROT
	55	%	46	%	/	%	CHECKSUM
-		%		%		%	

Effective Date: March 2015 Page 41 of 112

D. Restricting to Individual Factors of Quality or Condition

Inspections may be restricted to any individual factor(s), but only when requested by the applicant. This includes any factor of condition and quality (internal or external), as well as those that do not affect the grade, such as multiple hearts in onions or ambering on grapes, etc. Inspections may also be restricted to factors other than condition and quality such as freezing only, temperature only, weight only, etc. When restricted to any individual factor(s), report the fact under "REMARKS" (see Remarks section).

Znampros	•
REMARKS:	LOT A: RESTRICTED TO FREEZING ONLY AT APPLICANT'S REQUEST.

LOT C: RESTRICTED TO TEMPERATURE ONLY AT APPLICANT'S REQUEST.

REMARKS: INSPECTION RESTRICTED TO MISSHAPEN ONLY AT APPLICANT'S REQUEST.

In addition, for <u>inspections restricted to condition only</u>, report in "REMARKS" that the lot is restricted to condition only at applicant request.

Example:

Examples:

REMARKS: LOTS B AND C: RESTRICTED TO CONDITION ONLY AT APPLICANT'S REQUEST.

E. <u>Describing Decay or Soft Rot</u>

Report decay and soft rot according to their stages of advancement in general terms when the applicable tolerance is exceeded. Do not report the type of decay or soft rot on the notesheet or certificate. The stages of decay/soft rot are "early," "moderate," and "advanced." Do not use any terms other than those below, such as "various stages" or "all stages."

- Early: Approximately 10% or less of the surface or specimen affected.
- Moderate: Approximately 11 to 25% of the surface or specimen affected.
- Advanced: Approximately 26% or more of the surface or specimen affected.

On certain commodities there are different tolerances for decay/soft rot depending on the part of the commodity that is affected. For example, decayed stems on peppers are scored against the serious damage tolerance rather than the decay tolerance reserved for walls and calyxes. On lettuce and carrots, decay of wrapper leaves or leaf stems is scored against the serious damage tolerance instead of the decay/soft rot tolerance used for heads or roots. To avoid misunderstanding on such commodities, report the decay/soft rot that is scored against a different tolerance other than the decay/soft rot tolerance on a separate line as shown in the following example.

Example: Lot A is peppers, Lot B is carrots, and Lot C is lettuce.

OFFSIZE/DE	OFFSIZE/DE
DECAY AFFECTING STEMS	% DECAY AFFECTING STEMS
%DECAY	% DECAY AFFECTING WALLS & CALYXES
%CHECKSUM	% CHECKSUM
×	%
% SOFT ROT – TOPS	% SOFT ROT – TOPS
%SOFT ROT	% SOFT ROT – ROOTS
%CHECKSUM	% CHECKSUM
<u> </u>	%
DECAYED WRAPPER LEAVES	% DECAYED WRAPPER LEAVES
%DECAY	% DECAYED HEAD LEAVES
% CHECKSUM	% CHECKSUM
% · · · · · · · · · · · · · · · · · · ·	%

The left and right examples above show two methods for reporting decay/soft rot. In the left example, the decay/soft rot scored against a tolerance that differs from the decay/soft rot tolerance is notated. Therefore, it is not necessary to name the decay/soft rot scored against the restrictive tolerance for decay/soft rot. For example, on peppers decayed stems are scored against the 5% serious damage tolerance. Once the stem decay is reported, it is understood that the remaining decay is the one scored against the 2% decay tolerance, which is reserved for walls and calyxes. However, it is not incorrect to name both as shown in the example on the right. Lots A, B, and C also show different ways the entry may be worded.

When there is no decay/soft rot scored against a tolerance that differs from the decay/soft rot tolerance, do not report. However, decay/soft rot that is scored against the decay/soft rot tolerance is always reported even if there is none.

In the following pepper example, there is decay affecting stems in Lot A; therefore, it is reported. Even though there is no decay affecting walls and calyxes in Lot A, it is also reported. Lot B does not have any decay affecting

Effective Date: March 2015 Page 43 of 112

stems; therefore, do not report. Again, there is no decay affecting walls and calyxes in Lot B, but still report.

Example:

L O T	AVERAGE DEFECTS		Including DAMAGE SER. DAM		Including SER. DAM. V.S. DAM		OFFSIZE/DEFECTS
Α.	01	%	01	%		/ %	DECAY AFFECTING STEMS
	00	%	00	%	X	9	DECAY
	01	%	01	%		7	СНЕСКЅИМ
_		%		%		9	
В.	06	%	00	%		/ %	SHRIVELING (0 TO 14%)
	00	%	00	%	X	%	DECAY
	06	%	00	%		7	СНЕСКЅИМ
_		%		%		9/	

NOTE: The area affected by decay/soft rot (stems, tips, butts, etc.) may be further noted to give a clearer picture, as is shown in the following pepper and cabbage examples. The entry may be reported in the "OFFSIZE/DEFECTS" or "OTHER" sections, depending on how much space is needed.

Examples:

\cap	AVERAGE DEFECTS	Inclu DAM SER.	AGE	Includin SER. DAN V.S. DAN	Й.	OFFSIZE/DEFECTS	
	03	% 0	3 9	% /	/%	DECAY AFFECTING WALLS (0 TO 7%), EARLY STAGES	
	03	% 0	3 9	%	\ %	снескѕим	
_	ç	76	9	6	%		

OTHER
SOFT ROT AFFECTS BUTTS AND
HEAD LEAVES, MOSTLY EARLY
STAGES, SOME MODERATE.

F. Checksum

The term "Checksum" is always the last entry of the lot. It is the total of all percentages shown in each column for the lot. The "Checksum" validates that the percentages reported on the certificate have not been altered after issuance (see Checksum under Average Defects Columns heading).

Other

Use this area for reporting non-defective factors of size, quality, or condition. These non-defective factors include size ranges, defect and decay descriptions, and other factors which do

Effective Date: March 2015 Page 44 of 112

not affect grade but customarily have been reported on certificates because of their importance to applicants.

Report factors which include color of tomatoes, ripeness of fruit, ground color of fruit, sprouting of potatoes, yellowing of celery tops, condition of stems on grapes, and various other explanations. Other factors such as location of bruising, ambering of grapes, and color of calyxes on peas (except black color) may also be reported in this section using general quantity terms, but only when you deem them important or when requested by the applicant.

Left Example: Lot A: Apples, Lot B: Cantaloups, Lot C: Celery, Lot D: Potatoes. Right Example: Lot A: Tomatoes, Lot B: Grapes, Lot C: Light Skinned Sweet Cherry.

OTHER
LOT A: MOST FIRM, SOME FIRM RIPE,
FEW RIPE.
LOT B: MOST FIRM, MANY RIPE AND
FIRM. GROUND COLOR MOSTLY
LIGHT GREEN, SOME TURNING,
SOME YELLOW.
LOT C: MOST TOPS GREEN COLOR,
MANY TURNING YELLOW TO YELLOW.
LOT D: ALL SAMPLES SHOW VISIBLE
SPROUTS RANGING FROM BARELY
VISIBLE TO 1/4 INCH IN LENGTH, NOT
AFFECTING GRADE.

OTHER					
LOT A:	AVERAGE APPROXIMATELY				
50% G	REEN AND BREAKERS, 25%				
TURNI	NG AND PINK, 25% LIGHT RED				
AND R	ED COLOR.				
LOT B:	MOST SAMPLES SHOW SOME				
TO MA	ANY BERRIES TURNING AMBER				
TO AN	IBER COLOR, MANY SHOW NO				
AMBE	RING, NOT AFFECTING GRADE				
AND R	EPORTED AT APPLICANT'S				
REQUE	EST.				
LOT C:	GENERALLY SAMPLES SHOW				
SOME	TO MANY CHERRIES HAVING				
PINK T	O RED BLUSH.				

The applicant may request you to report a quality factor on a condition only inspection. Examples would be ambering of grapes or blush on light skinned varieties of sweet cherries. Report the quality factor in the "OTHER" section and charge the applicant for a grade and condition inspection on that lot.

Except for the factors mentioned previously and as provided by individual commodity instructions, avoid mentioning factors that do not affect grade without a specific request. If requested to report such factors, report with the statement "not affecting grade and reported at applicant's request."

When this section of the certificate contains information on more than one lot, precede the information by the letter of the lot(s) which it identifies.

The unused portions of the "OFFSIZE/DEFECTS" and "OTHER" sections may be combined to accommodate narrative descriptions. The narratives can cross the dotted line from one section to another, as shown in the following example.

REMARKS:

Effective Date: March 2015 Page 45 of 112

% ALL CARTONS IN TOP LAYER SHOW ALL CONTENTS BEING FROZEN. ALL CARTONS IN SECOND LAYER FROM THE TOP, MOST CARTONS ADJACENT TO TRAILER SIDE WALLS, AND ALL CARTONS ADJACENT TO REAR TRAILER DOORS SHOW SOME TO ALL OF CONTENTS ADJACENT TO CARTON TOP, SIDE(S), AND/OR BOTTOM BEING FROZEN. FREEZING PENETRATES FROM 2 INCHES TO ENTIRE CONTENTS, AND IS SO LOCATED AS TO SHOW THAT IT OCCURRED ON THE ABOVE MENTIONED TRAILER.

Examples of narratives include the following:

- Freezing statements (see example certificate numbers $\underline{10}$, $\underline{11}$, and $\underline{12}$)
- Condition of load and container reports (see example certificate number <u>13</u>)
- Net weight inspections (see example certificate number 14)
- Pack and pack ice statements (see example certificate <u>15</u>)
- Additional temperatures recorded, with the location (see example certificate number 16)
- Any other statements that may have a bearing on the inspection results may also be described in the unused portions of the "OFFSIZE/DEFECTS" and "OTHER" sections.

A. Number of Fruit Examined/Defective Fruit

On commodities, such as Texas citrus, in which the tolerances are based on the number of fruit affected, <u>do not report</u> the number of fruit examined or the total number of defective fruit unless such information is specifically requested by the applicant. If such information is requested, show the total fruit examined in the "OTHER" section and the defective fruit in a separate column at the far right of the "OFFSIZE/DEFECTS" section. Also, state in "REMARKS" the examined and defective fruit was reported at applicant's request as shown in the following Texas grapefruit example.

AVERAGE DEFECTS		Including DAMAG E SER. DAM		Including SER. DAM. V.S. DAM	OFFSIZE/DEFECTS	TOTAL FRUIT	OTHER
06	%	00	%	00	%QUALITY – CAKED MELANOSE, SCARS (0 TO 12%)	16	EXAMINED 264 FRUIT (8 – 33 COUNT

	%		%		9/		

EXAMINED AND DEFECTIVE FRUIT REPORTED AT APPLICANT'S REQUEST.

Effective Date: March 2015 Page 46 of 112

Grade

Report under this heading a statement showing whether or not the lot inspected meets the requirements to the grade or other specifications on which the inspection was based. When there is more than one grade statement, precede each statement by the letter of the applicable lot(s).

When there are no U.S. grade standards for the product, and a quality and condition inspection is performed, enter the words "No established U.S. Grade" next to the applicable lot heading.

Example: GRADE: LOTS A AND B: NO ESTABLISHED U.S. GRADE. If the lot(s) passes, write what grade or specification it passes after the letter of the lot(s) which it identifies. When there is only one lot, it is not necessary to write "Lot A" before the grade statement. Examples: LOT A: U.S. EXTRA FANCY: LOT B: U.S. NO. 1 SIZE A, 2 INCH OR 4 OUNCE MINIMUM;

LOT C: MEETS MARKED WEIGHT. LOT D: U.S. NO. 1 JUMBO.

GRADE: ALL LOTS: U.S. FANCY.

GRADE: U.S. NO. 1, SIZE 60, 70, 80, 90, AND 100 RESPECTIVELY.

GRADE: LOTS A AND C: U.S. NO. 1, CREAMERS; LOT B: U.S. NO. 2, 10 OUNCE MINIMUM;

LOT D: U.S. NO. 1 RED.

Report lots failing to grade due to quality defects on the certificate as: "Fails to grade account quality." This statement applies even when a lot contains condition defects that are also in excess of the tolerance. Do not mention condition defects under the "GRADE" heading when a lot fails to grade account quality.

Effective Date: March 2015 Page 47 of 112

Example:

GRADE: LOT A: FAILS TO GRADE U.S. NO. 1 ACCOUNT QUALITY;

LOT B: FAILS TO GRADE U.S. NO. 1 ACCOUNT QUALITY (SOLUBLE SOLIDS).

Some standards have separate classes or types of quality defects with separate tolerances or allowances. Whenever such lots fail to grade account quality, have the grade statement clearly indicate when they fail account of one of these other tolerances or allowances.

Example: Lot A: Sweet Peppers, Lot B: Onions

GRADE: LOT A: FAILS TO GRADE U.S. FANCY RED ACCOUNT QUALITY (GREEN PEPPERS IN A RED LOT);

LOT B: FAILS TO GRADE U.S. NO. 1 JUMBO ACCOUNT QUALITY (STAINING).

Example: Lot A: Florida Oranges, Lot B: Celery

GRADE: LOT A: FAILS TO GRADE U.S. FANCY ACCOUNT QUALITY (EXCESSIVE DISCOLORATION);

LOT B: FAILS TO GRADE U.S. NO. 1 ACCOUNT QUALITY (DIRT).

When quality defects are within the tolerances but condition defects alone exceed a tolerance, or condition defects and quality defects combined exceed a tolerance, use the following "GRADE" heading: "Fails to grade ______ account condition."

As with quality defects, some standards have separate classes or types of condition defects with separate tolerances or allowances for them. Whenever such lots fail to grade account condition, have the grade statement for such products clearly indicate when they fail account of one of these other tolerances or allowances.

Example: Lot A: Potatoes, Lot B: Onions

GRADE: LOT A FAILS TO GRADE U.S. NO. 1, 5 OUNCE MINIMUM ACCOUNT CONDITION (VISIBLE SPROUTS).

LOT B FAILS TO GRADE U.S. NO. 1 MEDIUM ACCOUNT CONDITION (SURFACE MOLD).

The above type of condition grade statement does not apply for apples and pears. When certifying apples or pears under U.S. standards and most State standards, factors which may have developed after storage or in transit affect condition and not grade. This means that apples and pears do not "fail to grade account condition." Therefore, state under the "GRADE" heading: "U.S. Fancy, decay being a factor of condition" or "U.S. Extra Fancy, bruising and bitter pit being factors of condition," etc.

SCI Division Inspection Series

Effective Date: March 2015 Page 48 of 112

Example:

GRADE: U.S. EXTRA FANCY, BITTER PIT AND DECAY BEING FACTORS OF CONDITION.

LOT B: US. NO. 1, DARK SKIN DISCOLORATION BEING A FACTOR OF CONDITION.

Individual commodity inspection instructions give full details for writing grade statements when individual containers exceed the tolerance for a product. The following grade statements are examples of lots failing to meet container tolerances although the lot average is within tolerance.

Examples:

GRADE: LOT A: FAILS TO GRADE U.S. NO. 1 ACCOUNT QUALITY IN A FEW SAMPLES.

LOT B: FAILS TO GRADE U.S. EXTRA FANCY ACCOUNT CONDITION IN SOME SAMPLES.

GRADE: FAILS TO GRADE U.S. NO. 1 ACCOUNT OVERSIZE IN A FEW CARTONS.

If size is part of grade, the lot may also fail when not meeting size requirements.

Example:

GRADE: LOT A: FAILS TO GRADE U.S. NO. 1 ACCOUNT OF UNDERSIZE.

LOT B: FAILS TO GRADE U.S. FANCY ACCOUNT OF OFFSIZE.

If size is <u>not</u> part of grade, the lot may meet or fail size requirements independently of meeting or failing quality and/or condition factors, as shown in the tomato example below.

GRADE: LOT A: U.S. NO. 1. FAILS TO MEET SIZE AS MARKED.

When there are other factors, such as marking and pack requirements that are not part of grade, the lot may meet or fail these requirements independently of whether or not the lot meets quality and/or condition factors, as shown in the tomato (Lot A) and apple (Lot B) example below.

GRADE: LOT A: U.S. NO. 1. FAILS TO MEET MARKING REQUIREMENTS AS TO SIZE.

LOT B: U.S. EXTRA FANCY. FAILS TO MEET PACKING REQUIREMENTS.

LOT C: RESTRICTED TO CONDITION ONLY AT APPLICANT'S REQUEST.

REMARKS: RESTRICTED TO 4 PALLETS NEAREST REAR DOORS.

REMARKS: LOT A: NET WEIGHT DETERMINED AND REPORTED AT APPLICANT'S REQUEST.

LOT B: DIAMETER BASED ON 3 INCH MINIMUM AT APPLICANT'S REQUEST.

REMARKS: INSPECTION RESTRICTED TO RANGE AND AVERAGE COUNT OF PEPPERS

PER CARTON, ONLY AT APPLICANT'S REQUEST.

Effective Date: March 2015 Page 50 of 112

Whenever an inspection covers more than four lots from the same shipper, additional certificates may be written with each certificate cross-referenced to all other certificates issued on that load.

Example:

REMARKS: FOR REMAINDER OF LOAD, SEE CERTIFICATES T-XXXXXX-2 AND T-XXXXXXX-3.

When all lots cannot fit on one certificate, use additional certificates and cross-reference.

Example:

REMARKS:

SEE CERTIFICATE T-XXXXXX-X FOR REMAINDER OF LOTS.

Inspector's Signature

Enter your signature or the supervising inspector authorizing the results of the inspection here. When an additional inspector(s) has assisted in running samples during the inspection, have them also sign the certificate prior to issuance whenever practical.

NOTE: Print your name by your signature if it is illegible.

Market Office

Enter the local duty office location (city and state). Even if the certificate and notesheets are sent to another office for completion, billing, or filing, the local duty office is still entered here. When there is no official office established at the duty location, show the office location which performs the billing and filing functions.

Estimated Total

Enter the estimated total of all charges in dollars and cents. Included charges are inspection fees, travel time, overtime, mileage, tolls, and any other appropriate expenses incurred during the performance of the inspection. For specific guidelines for determining charges, including current fees, refer to your immediate supervisor or a representative from the Inspection Branch's Operation Section.
